User Story

- As a sales executive at TheChaiShop&Co, I need a CRM system that helps me organize and maintain customer relationships while simplifying the overall sales workflow.
- The application should allow me to quickly view, modify, and maintain employer and customer details in one place. It should also differentiate between online and offline customers using record types so that interactions can be tailored based on how customers. engage with the business.
- In addition, the system should automatically perform sales-related calculations such as order quantity and total billing amount, ensuring transactions are processed accurately and efficiently without manual effort.
- I also require access to reports and dashboards that summarize sales activities and performance metrics, enabling better analysis of sales trends and supporting informed business decisions.
- Finally, the CRM should automatically send birthday email notifications to customers along with special promotional offers, helping strengthen customer relationships and encouraging continued engagement with the brand.

1. INTRODUCTION

1.1 Project Overview

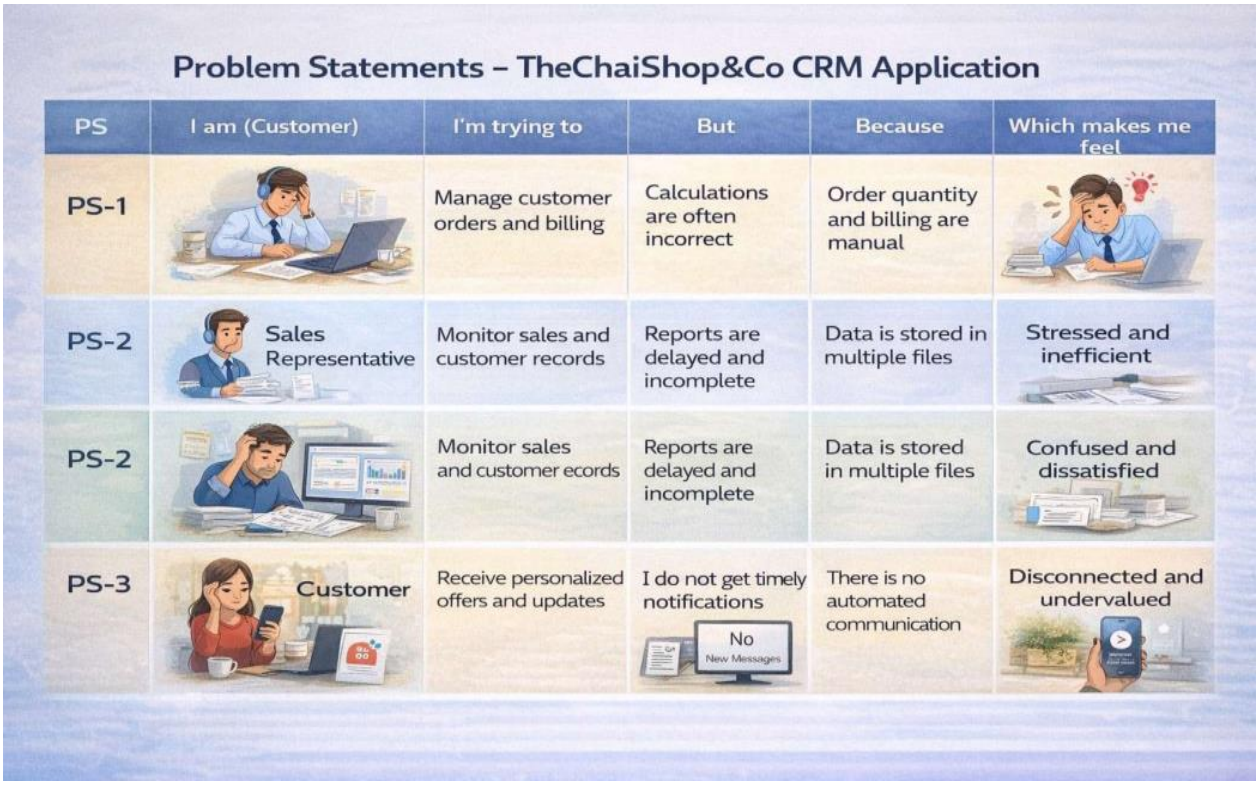
- The project titled "CRM System for TheChaiShop&Co" aims to design and Implement a Salesforce-based Customer Relationship Management application that enhances how the organization manages its customers and sales operations.
- This system will help store and manage information related to customers, employers,and enterprise accounts in a structured manner.
- By incorporating reports, dashboards, and automated notifications, the application provides valuable insights into sales performance while improving customer interaction and satisfaction.

The **user story and key project objectives** are introduced in the opening section of this document to outline the requirements and goals of the CRM solution.

Project Purpose

The main objective of this project is to:

- Improve the efficiency of managing customer relationships
- Reduce manual effort by automating order processing and billing calculations
- Maintain accurate and reliable customer and sales data
- Support better business decisions using organized sales data and reports
- Increase customer satisfaction through automated email notifications and personalized communication



2. IDEATION PHASE

2.1 Problem Statement

PS	Customer	Trying to	But	Because	Which makes me feel

PS-1	Sales Representative	Process customer orders and calculate billing	The calculations sometimes contain errors	Orders and billing amounts are calculated manually	Overwhelmed and less productive
PS-2	Store Manager	Track overall sales and maintain customer records	Reports are not generated on time	Information is scattered across different files	Uncertain and dissatisfied
PS-3	Customer	Receive updates and promotional offers	Notifications are not sent regularly	There is no automated communication system	Ignored and less valued

2.2 Empathy Map Canvas

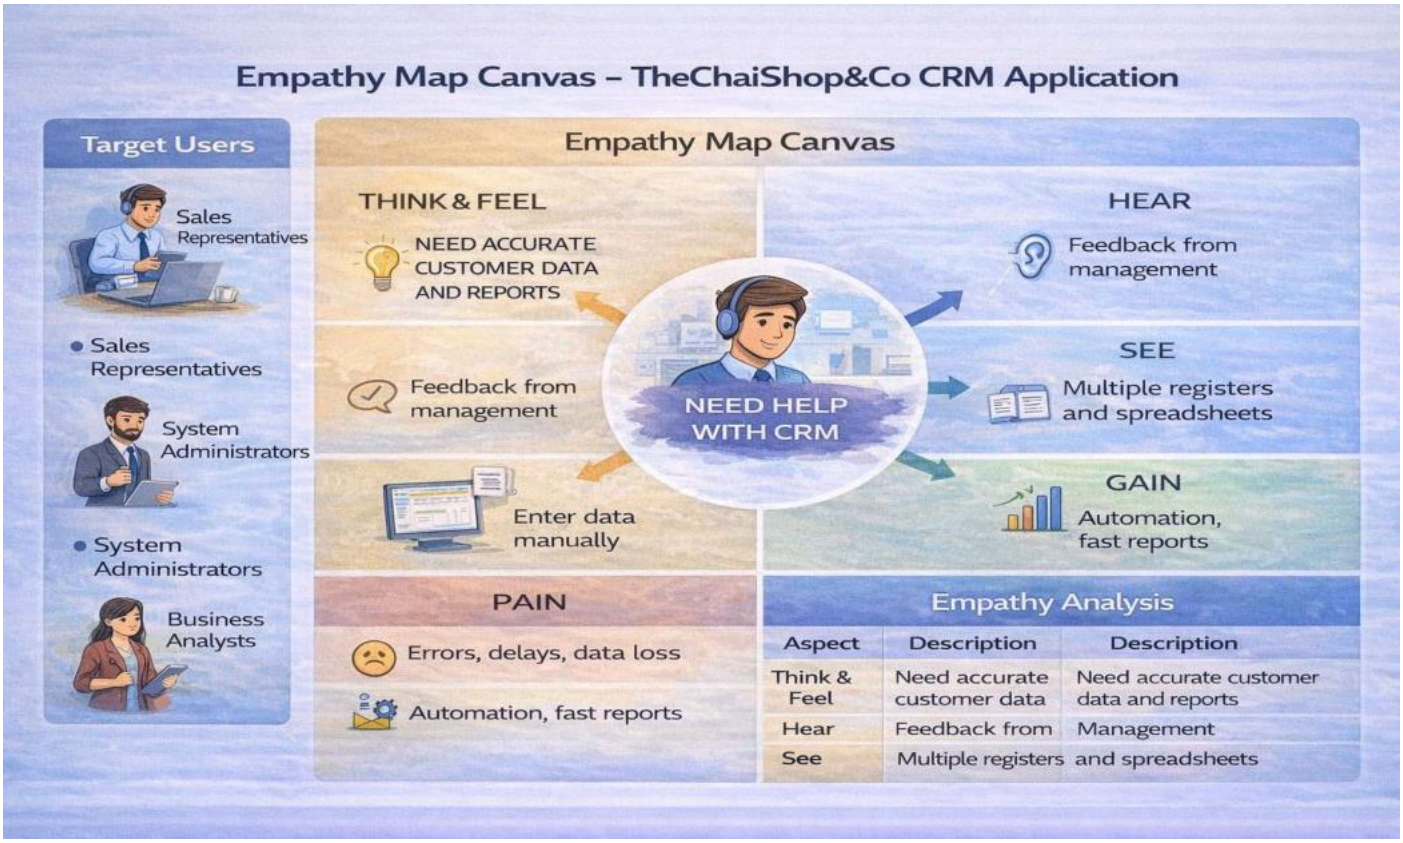
Target Users

- Sales Executives
- Store Managers
- CRM/System Administrators
- Business Analysts

Empathy Analysis

Aspect	Description

Think & Feel	Users want reliable customer information and accurate sales reports.
Hear	They often receive feedback and instructions from senior management regarding sales performance.
See	They work with multiple registers, spreadsheets, and scattered records while managing data.
Say & Do	They manually enter customer details, orders, and billing information into different systems.
Pain	Frequent errors, delays in report generation, and risk of losing important data.
Gain	Automated processes, quicker report generation, and improved efficiency in managing records.



2.3 Brainstorming

Generated Ideas

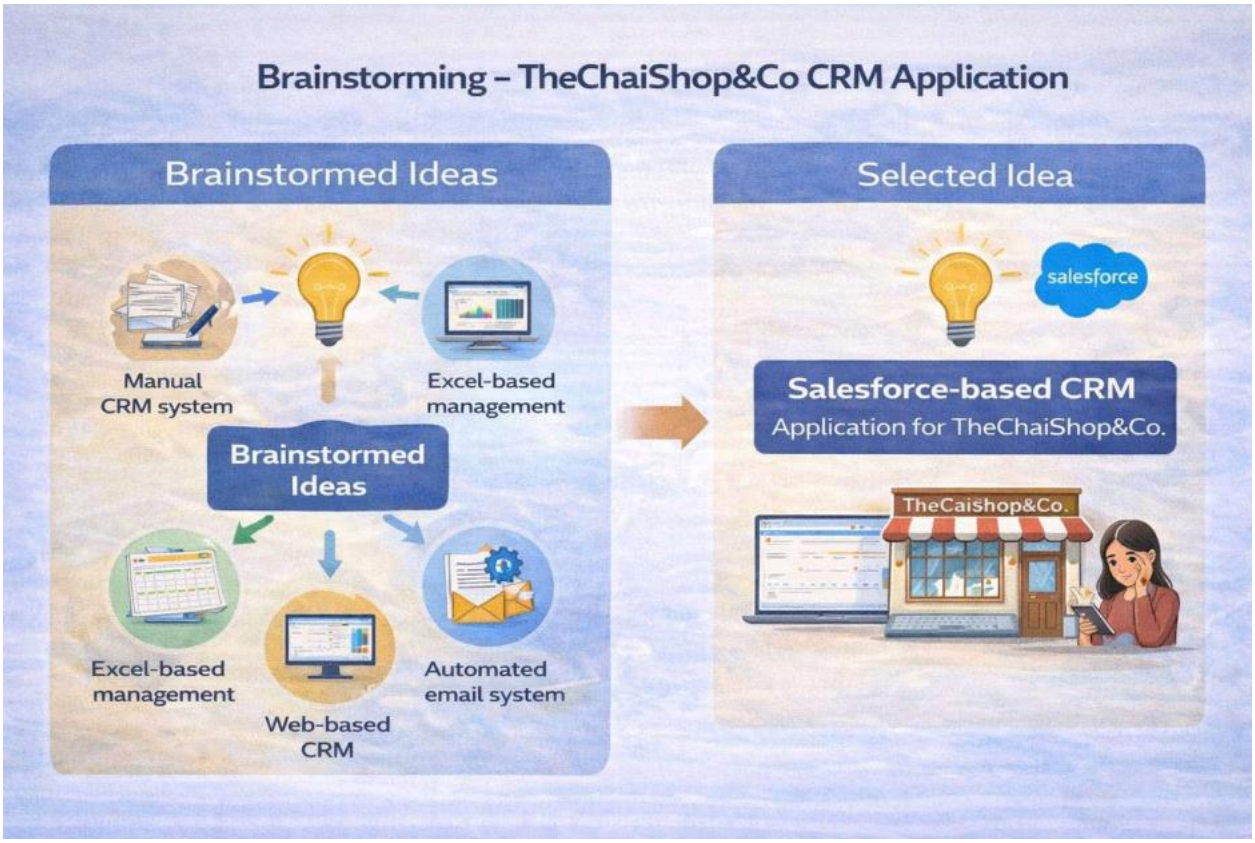
During the brainstorming process, several possible solutions were identified:

- Developing a **manual customer management system**
- Managing customer data using **Excel spreadsheets**
- Creating a **web-based CRM application**
- Implementing a **Salesforce-based CRM platform**
- Setting up an **automated email notification system**

Selected Idea

After evaluating the available options, the team decided to implement a **Salesforce-based CRM Application for TheChaiShop&Co**.

This solution was selected because it provides powerful CRM features such as automation, centralized data management, reporting tools, and improved customer communication.



3. REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

The customer journey within the CRM application follows several important stages that help users complete their tasks efficiently.

Journey Steps

- **User Login** – The user signs into the CRM system using their credentials.
- **Open CRM Dashboard** – After login, the user navigates to the main CRM

application interface.

- **Add Customer Information** – Customer details are entered and stored in the system.
- **Create Orders** – Sales representatives generate new orders for customers.
- **Billing Calculation** – The system automatically calculates the total bill based on order

quantity and price.

- **Review Reports** – Managers and staff access reports to monitor sales activities.
- **Business Decisions** – Insights from reports help management make informed business

decisions.

3.2 Solution Requirements

Functional Requirements

FRNo	Requirement

FR-1	User Authentication (Login)
FR-2	Creation of CRM Objects
FR-3	Customer Data Management
FR-4	Automatic Billing Calculation
FR-5	Report and Dashboard Creation
FR-6	Automated Email Notifications

Non-Functional Requirements

NFR-1: Usability

The CRM system should be simple and convenient for users such as sales representatives, managers, system administrators, and analysts so that they can operate it without advanced technical knowledge.

Requirements

- Clean and easy-to-use interface
- Simple navigation across modules
- Well-structured forms for entering data
- Interactive dashboards for quick insights

Example

A newly hired sales executive should be able to log into the system, enter customer information, and create an order within a short time without needing assistance.

Salesforce Lightning provides user-friendly navigation and drag-and-drop customization features.

NFR-2: Security

The CRM platform must ensure that sensitive business and customer information remains protected from unauthorized access.

Requirements

- Access control based on user roles
- Secure login authentication methods
- Encrypted storage of important data
- Regular data backup and recovery mechanisms

Examples

Using **profiles and permission sets**

Implementing **object-level and field-level security**

Restricting access to billing information

Applying strong password policies and secure login settings

NFR-3: Reliability

The CRM application must operate consistently and maintain accurate data storage without risk of loss.

Requirements

- Automatic saving of entered data
- scheduled system backups
- Error handling and recovery mechanisms
- Dependable cloud infrastructure

Example

If a user is entering order information and the internet connection fails, the system should preserve the entered data and restore it once the connection is re-established.

Salesforce cloud services provide automated backup features.

NFR-4: Performance

The system should provide fast responses and efficiently process large volumes of business data.

Requirements

- Quick page loading time
- Rapid generation of reports
- Smooth dashboard performance
- Minimal delays during operations

Example

When a manager generates a monthly sales report involving hundreds of customer records, the system should display the results within a few seconds.

Optimized data queries and caching mechanisms help improve system performance.

NFR-5: Availability

The CRM system should be accessible whenever users need it.

Requirements

- Continuous system availability (24/7)
- Very low downtime
- Cloud-based infrastructure
- Backup and disaster recovery mechanisms

Example

Managers should be able to access the CRM platform during working hours, weekends, or even late at night without interruption.

Salesforce cloud infrastructure ensures high system uptime.

NFR-6: Scalability

The CRM application must support future business expansion without reducing system efficiency.

Requirements

- Ability to handle additional users

- Support growing volumes of customer records
- Flexible and expandable data storage
- Consistent system speed during growth

Example

If TheChaiShop&Co expands to several branches, the CRM system should still manage thousands of customer records without slowing down.

Salesforce infrastructure allows automatic scaling based on business needs.

3.4 Technology Stack

Layer	Technology

Frontend	Salesforce Lightning
Database	Salesforce Cloud
Automation	Flows
Backend	Salesforce Platform
Analytics	Reports & Dashboards

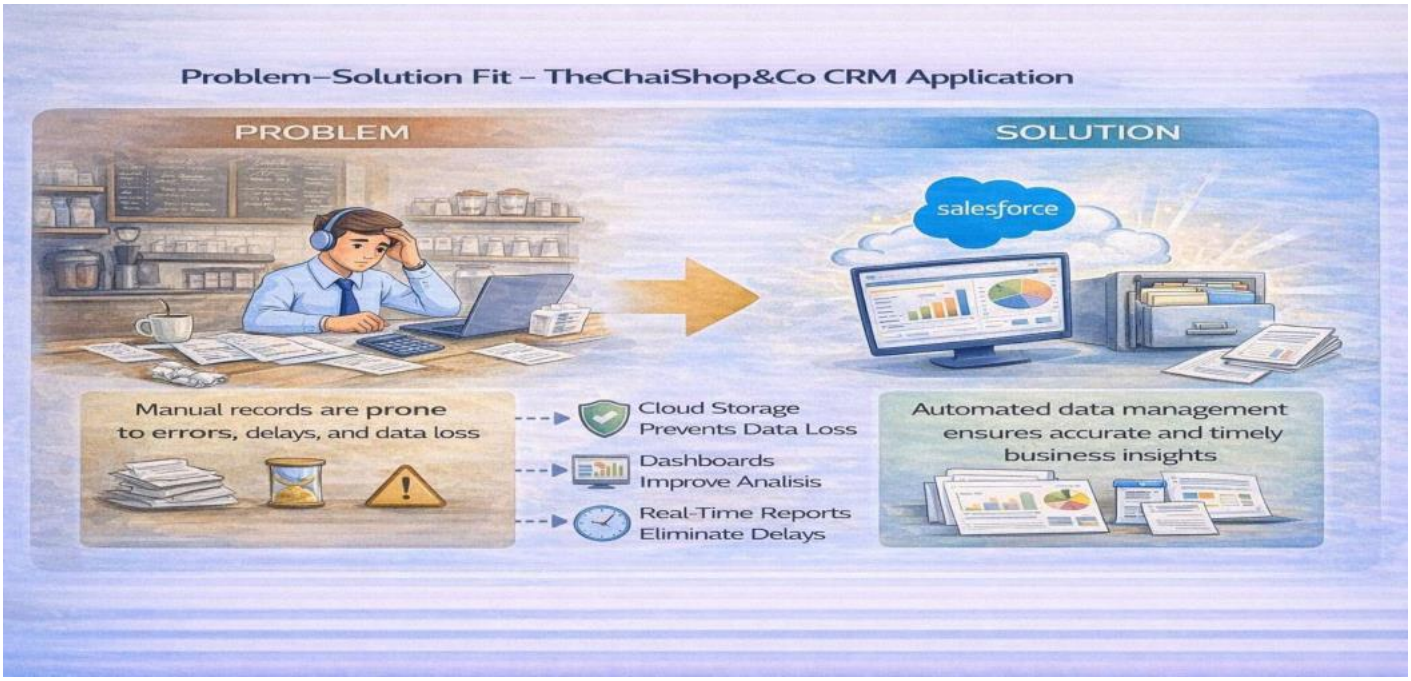
4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

The proposed CRM system addresses the limitations of traditional manual record-keeping by introducing an automated and centralized data management solution. Instead of relying on paper records or scattered files, all customer and sales information will be securely stored in the cloud.

With the help of **real-time reports and interactive dashboards**, users can quickly analyze sales performance and customer data. Cloud storage also ensures that important information is protected from data loss and can be accessed anytime.

Overall, the system improves accuracy, reduces delays in reporting, and enables businesses to make faster and more informed decisions.



4.2 Proposed Solution

Functional Requirements

Parameter	Description
User Login & Authentication	Provides secure system access by allowing only authorized users to log in using valid usernames and passwords.
Customer Record Management	Allows users to add, view, modify, and remove customer information such as name, phone number, and address.
Employer & Enterprise Management	Supports the management of employer and enterprise account details required for business operations.
Order Management	Enables users to create new customer orders and monitor order details including quantity and product information.
Automated Billing System	Automatically calculates the total bill amount using predefined formulas based on order quantity and product pricing.
Validation Rules	Maintains data accuracy by validating inputs like phone numbers, PAN numbers, and Aadhaar details.

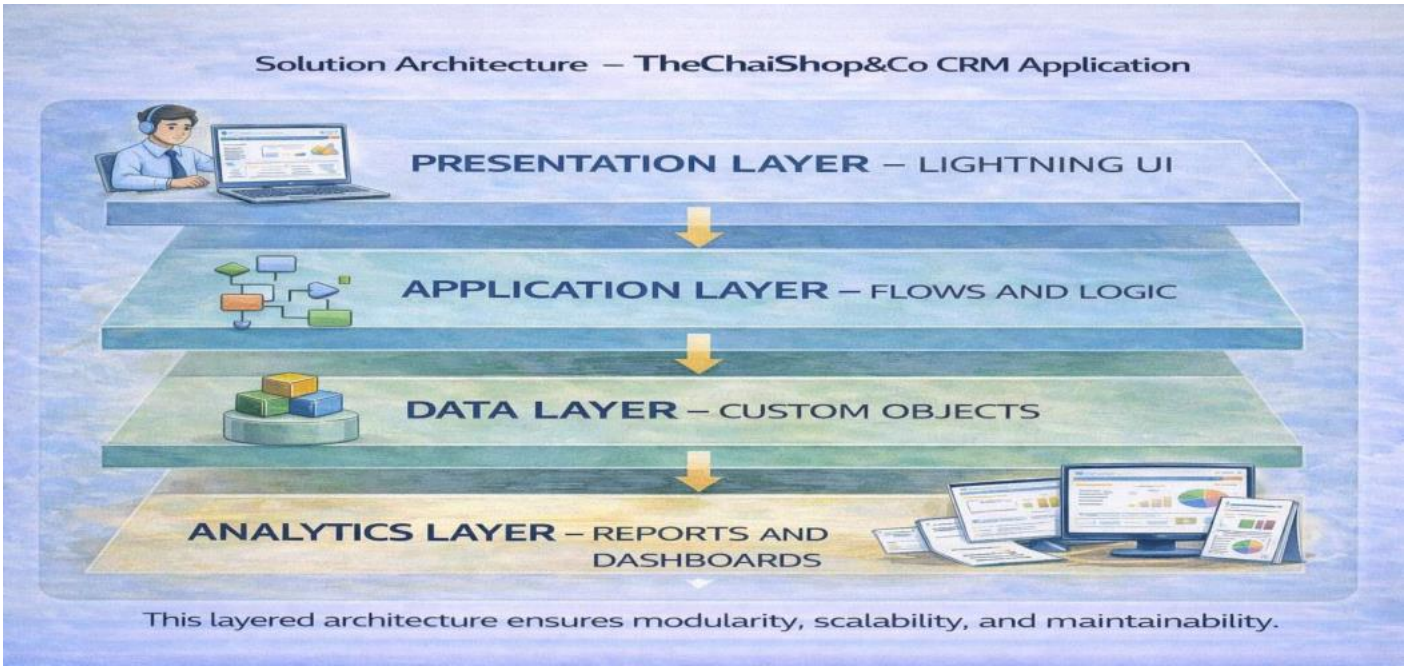
Record Types & Page Layouts	Allows the creation of different record types and customized page layouts for various customer and enterprise categories.
Global Picklists	Provides standardized dropdown values for fields such as product category, product type, and status.
Email Notification System	Sends automated emails to customers for events like birthdays, promotional offers, and order confirmations.
Workflow & Flow Automation	Automates system tasks such as updating records and sending alerts using Salesforce Flow automation tools.
Report Generation	Creates detailed reports related to sales activities, customer information, and enterprise performance.
Dashboard Visualization	Presents real-time insights through dashboards containing charts and visual analytics.
Data Backup & Recovery	Protects business data by securely storing it in the Salesforce cloud and enabling recovery when needed.
User Role Management	Manages system access using profiles and permission sets assigned to different user roles.

4.3 Solution Architecture

Architecture Layers

1. Presentation Layer – Lightning UI
2. Application Layer – Flows and Logic
3. Data Layer – Custom Objects
4. Analytics Layer – Reports and Dashboards

This layered architecture ensures modularity, scalability, and maintainability.



5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

- The development of this CRM system followed an **Agile methodology**, where work was divided into multiple sprints with specific milestones.
- A **Salesforce Developer Account** was created to establish the development and testing environment.
- **Custom objects** were designed to maintain records related to customers, employers, and enterprise accounts.
- **Custom tabs and a Lightning application** were developed to simplify navigation across different CRM modules.
- Required **fields, relationships, and global picklists** were configured to maintain uniform data across records.
- **Record types and page layouts** were implemented according to different user roles and customer categories.
- **Validation rules** were applied to ensure accurate data entry and avoid incorrect information.
- **Email templates and automated flows** were configured to notify customers about offers, orders, and birthdays.

Reports and dashboards were developed to track sales activities and analyze business performance.

Periodic **sprint reviews and testing sessions** were conducted to monitor development progress and fix issues.

The project was successfully completed within the planned timeline using a structured development schedule.

Product Backlog & Sprint Schedule

Sprint	Functional Requirement (Epic)	User Story No	User Story / Task	Story Points	Priority	Team Member
Sprint-1	Developer Setup	USN-1	As an administrator, I want to create a Salesforce developer account so that the CRM application can be configured and deployed.	1	High	Member1
Sprint-1	Data Modeling	USN-2	As an admin, I want to create Customer, Employer, and Enterprise objects so that business data can be organized properly.	3	High	Member2
Sprint-2	Data Modeling	USN-3	As a user, I want individual tabs for each object so that navigation within the CRM system becomes easier.	3	High	Member3

Sprint-2	Data Modeling	USN-4	As a manager, I want a Lightning App so that all CRM features are available in one place.	3	High	Member4
Sprint-2	Data Modeling	USN-5	As an admin, I want to add customer and order fields so that billing and sales information can be recorded.	5	Medium	Member1
Sprint-2	Data Modeling	USN-6	As a user, I want different page layouts for various record types so that relevant fields are displayed.	5	High	Member2
Sprint-2	Data Modeling	USN-7	As a manager, I want separate record types for Retail and Enterprise customers for easier categorization.	5	Medium	Member3
Sprint-3	Automation	USN-8	As a system, I want to validate order and customer information to reduce incorrect entries.	3	High	Member4
Sprint-3	Automation	USN-9	As a system, I want automated flows that send email notifications to customers.	5	High	Member1
Sprint-4	Automation	USN-10	As a system, I want billing calculations to	5	High	Member2

			be performed automatically using formulas.			
Sprint-5	Reports	USN-11	As a manager, I want reports on customers and sales to evaluate business performance.	4	High	Member3
Sprint-6	Dashboards	USN-12	As a manager, I want visual dashboards to analyze CRM data quickly.	4	Medium	Member4

Project Tracker, Velocity & Burndown

Sprint	Total Story Points	Duration	Sprint Start Date	Planned End Date	Story Points Completed	Actual Release Date
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	05 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	12 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	19 Nov 2022

6. PROJECT DEVELOPMENT PHASE

Project Flow

The development of the CRM application was structured around key milestones, each focusing on a specific aspect of the Salesforce implementation:

1. **Developer Account Setup** – Creation of a Salesforce developer account to begin the project.
2. **Custom Object Creation** – Designing objects to store customer, employer, and enterprise data.
3. **Tab Configuration** – Creating separate tabs for easy access to objects.
4. **Lightning App Development** – Setting up a centralized application for smooth navigation.
5. **Global Picklist Setup** – Defining standard values for commonly used fields.
6. **Fields & Relationships** – Configuring field types and establishing object relationships.
7. **Page Layout Creation** – Customizing page layouts for different user roles and data entry needs.
8. **Record Type Definition** – Setting up record types for Retail and Enterprise categories.
9. **Validation Rule Implementation** – Ensuring accurate data entry by validating key fields.
10. **Email Template Creation** – Designing email templates for notifications and offers.
11. **Flow Automation** – Automating business processes such as sending emails and updating records.
12. **Report & Dashboard Generation** – Developing interactive reports and dashboards for analytics.
13. **Project Conclusion** – Final review and deployment of the CRM application.

Key Learning Outcomes

Through this project, participants gain hands-on experience with:

1. Implementing a **real-time Salesforce project** from start to finish.

2. Creating **standard and custom objects** for business data.

3. Using **global picklists** for standardized field values.

4. Configuring **different types of fields and establishing relationships** between objects.

5. Designing **page layouts** for efficient data entry.

6. Setting up **record types** to manage multiple business categories.

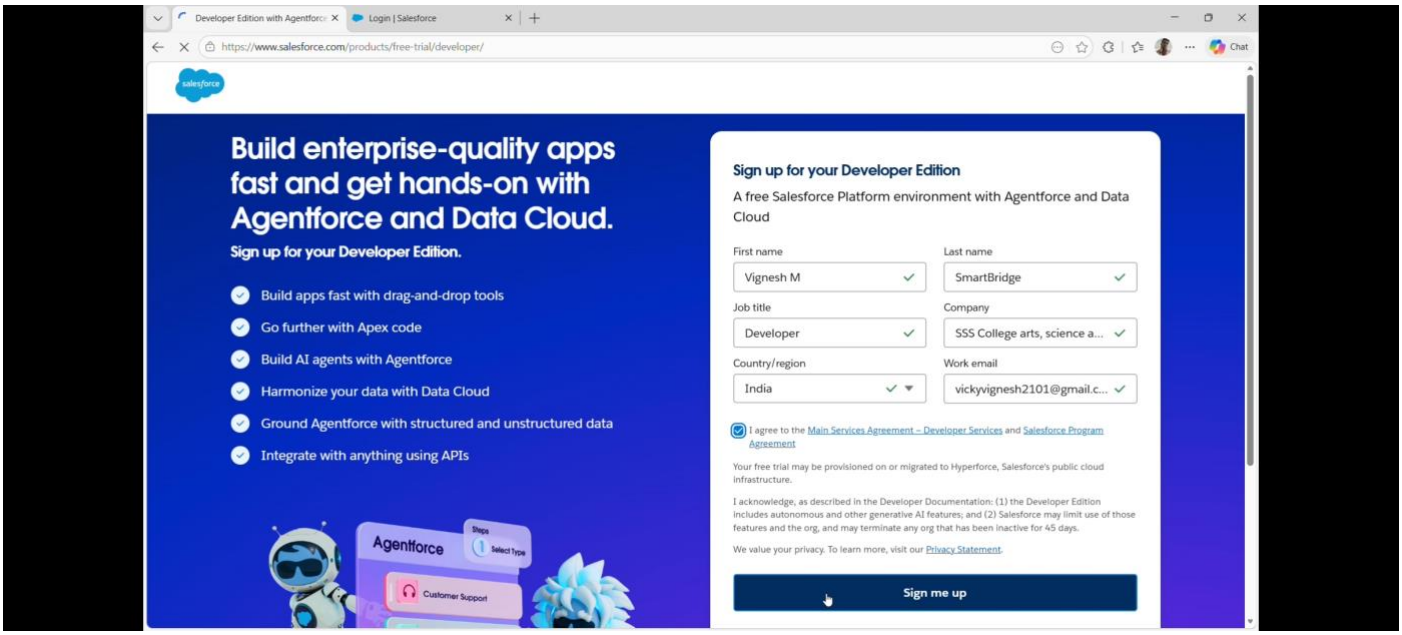
7. Implementing **validation rules** to maintain data accuracy.

8. Creating **email templates** for automated communication.

9. Developing **flows** to automate repetitive tasks.

10. Building **reports and dashboards** for real-time business insights.

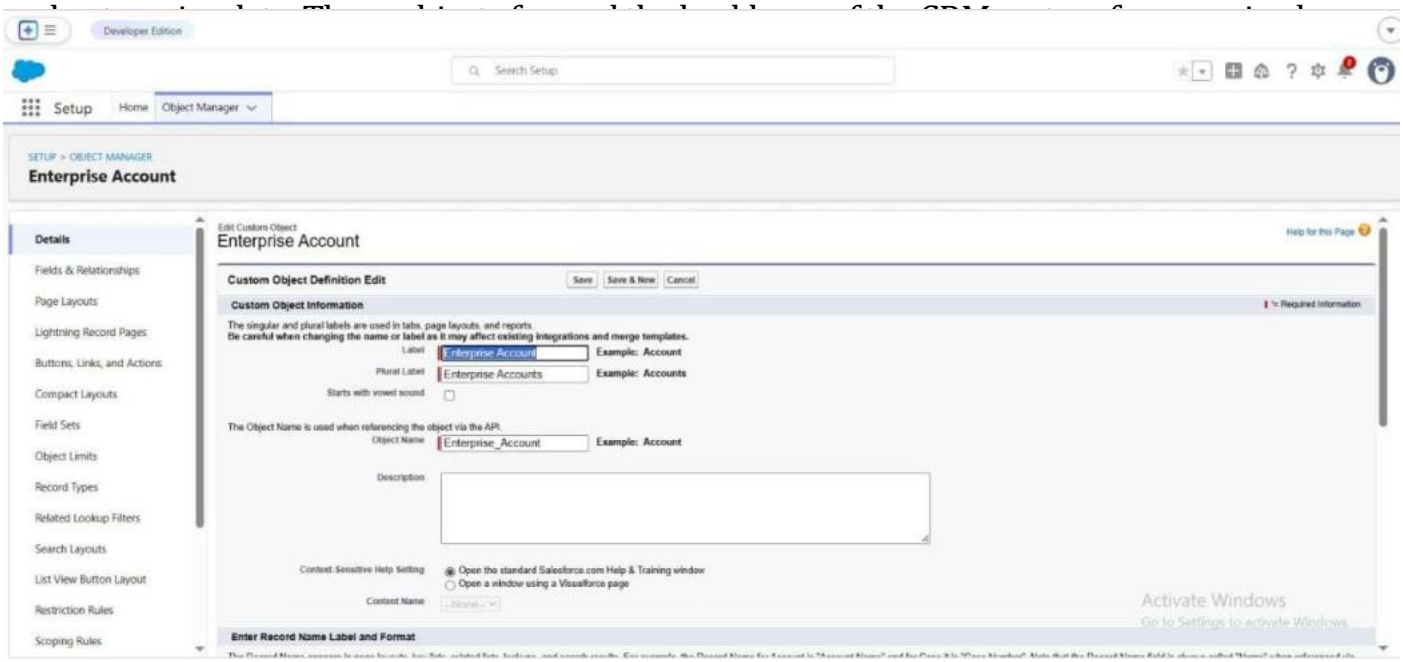
Milestone 1: Developer Account Setup

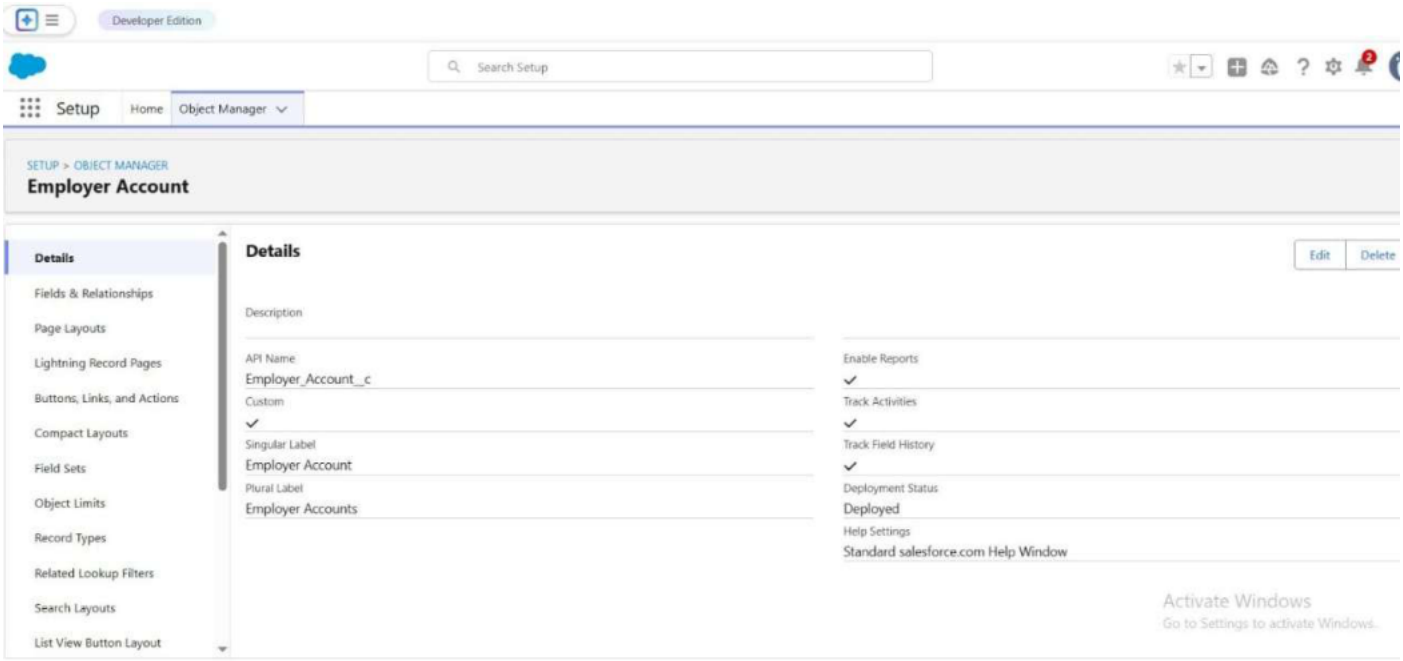


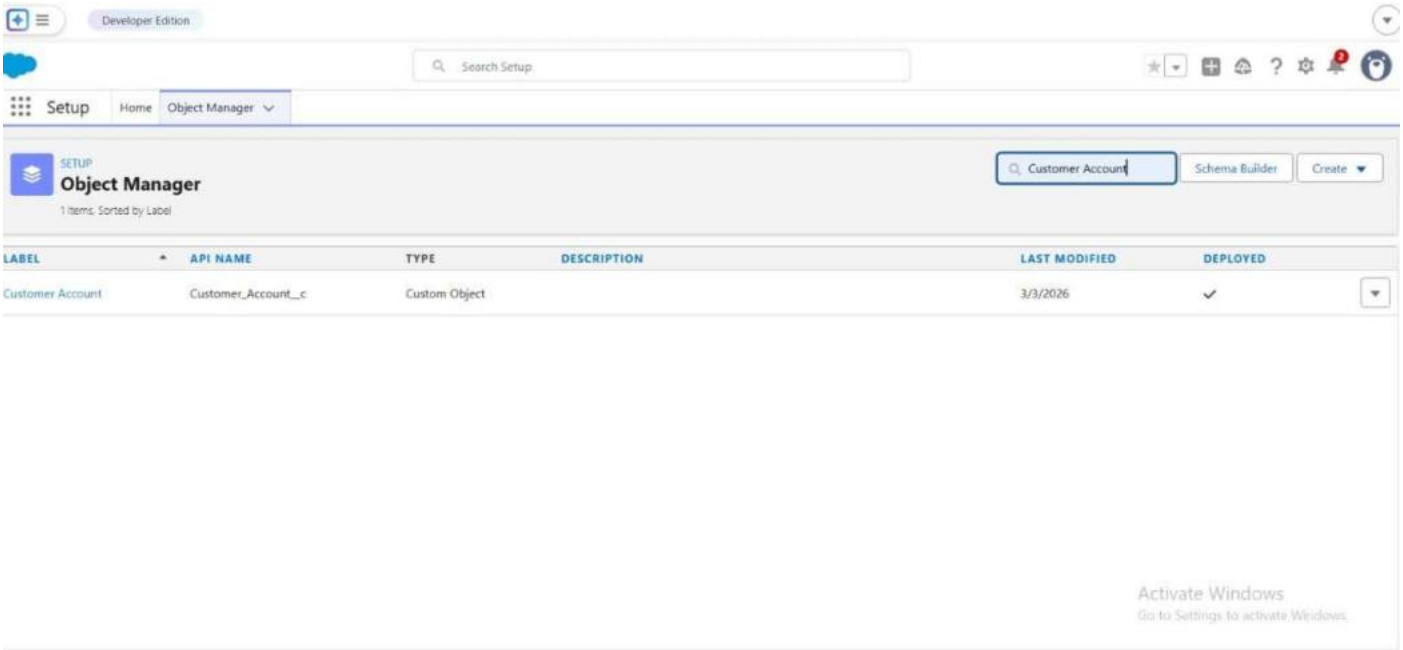
ne involved creating a **Salesforce developer account**. This step set up the development environment needed to configure and deploy the CRM application.

Milestone 2: Custom Object Creation

The second milestone focused on creating **custom objects** for storing customer, employer,

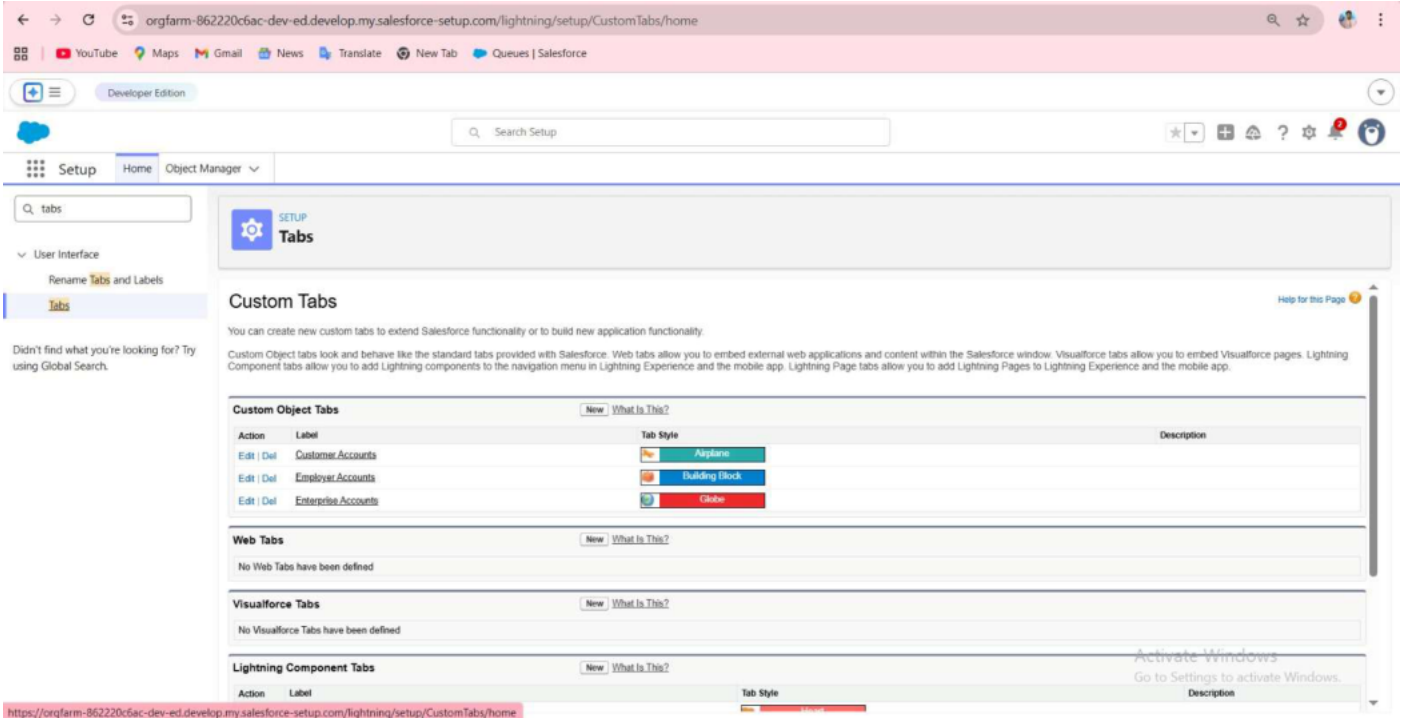






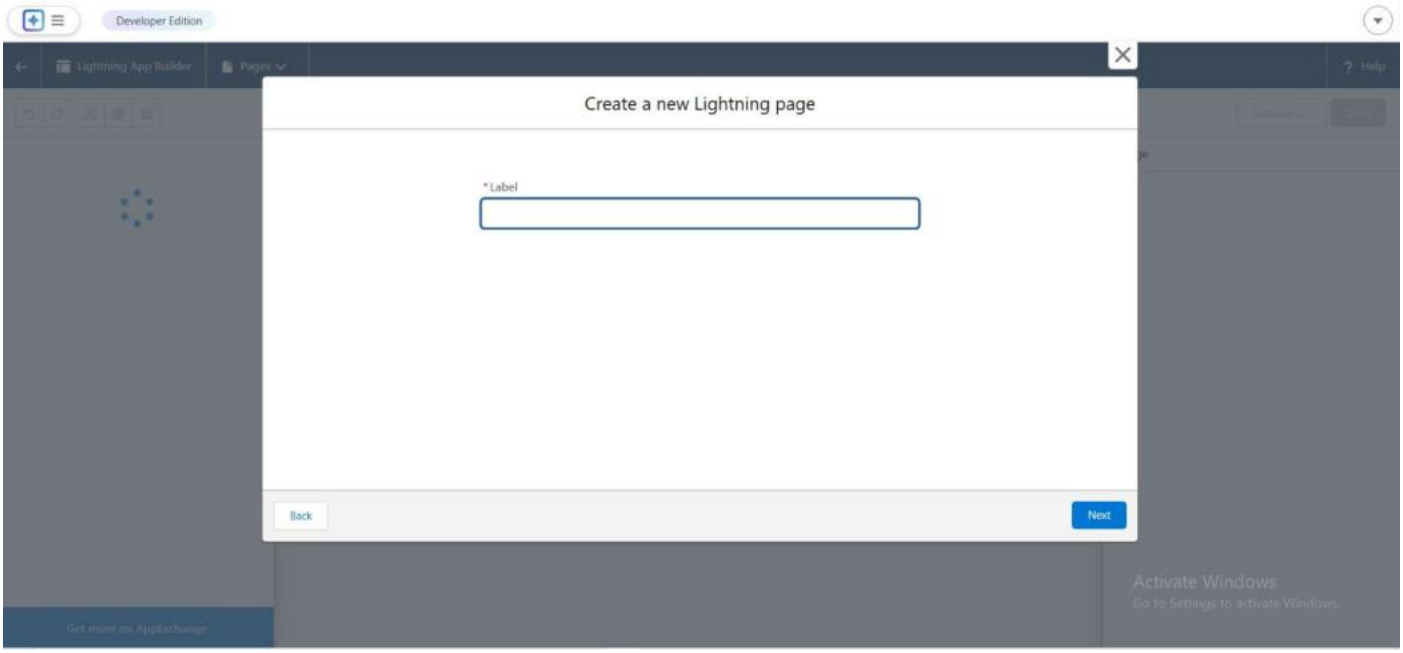
Milestone 3 – Tabs

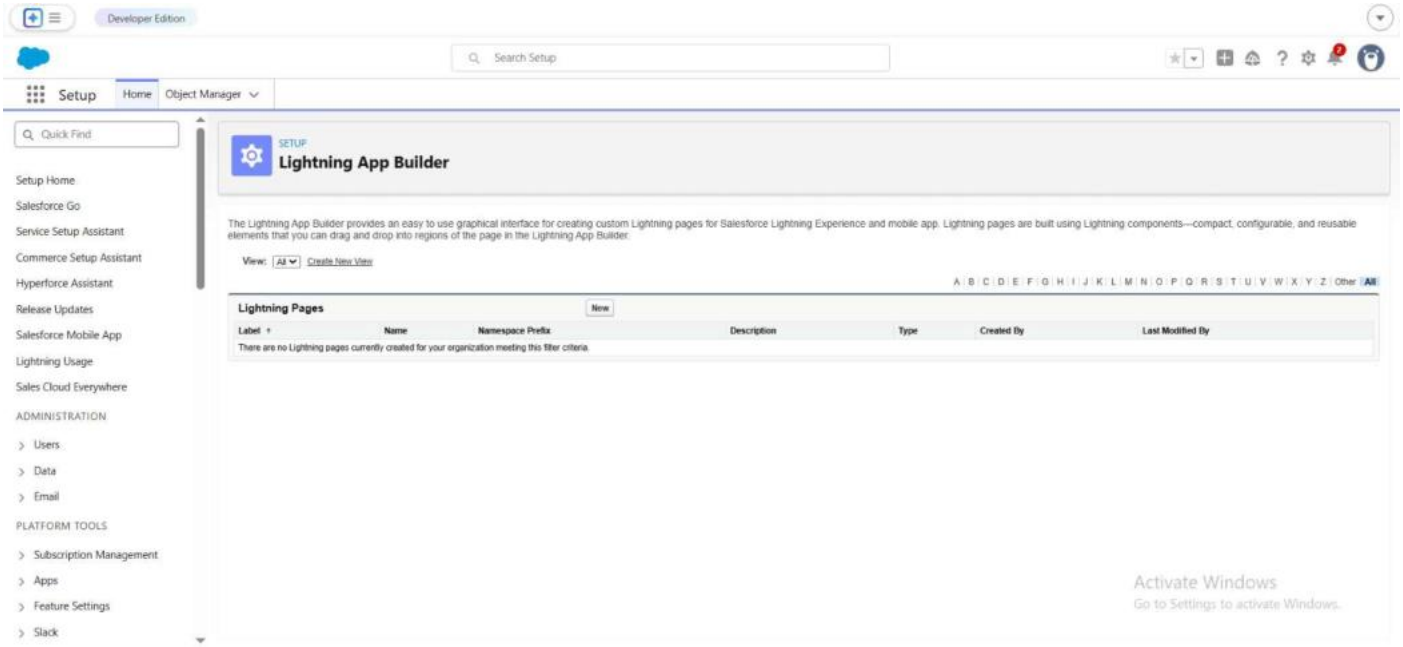
The third milestone involved creating separate tabs for each custom object. This allowed users to navigate easily between customer, employer, and enterprise records within the CRM system.



Milestone 4 – The Lightning App

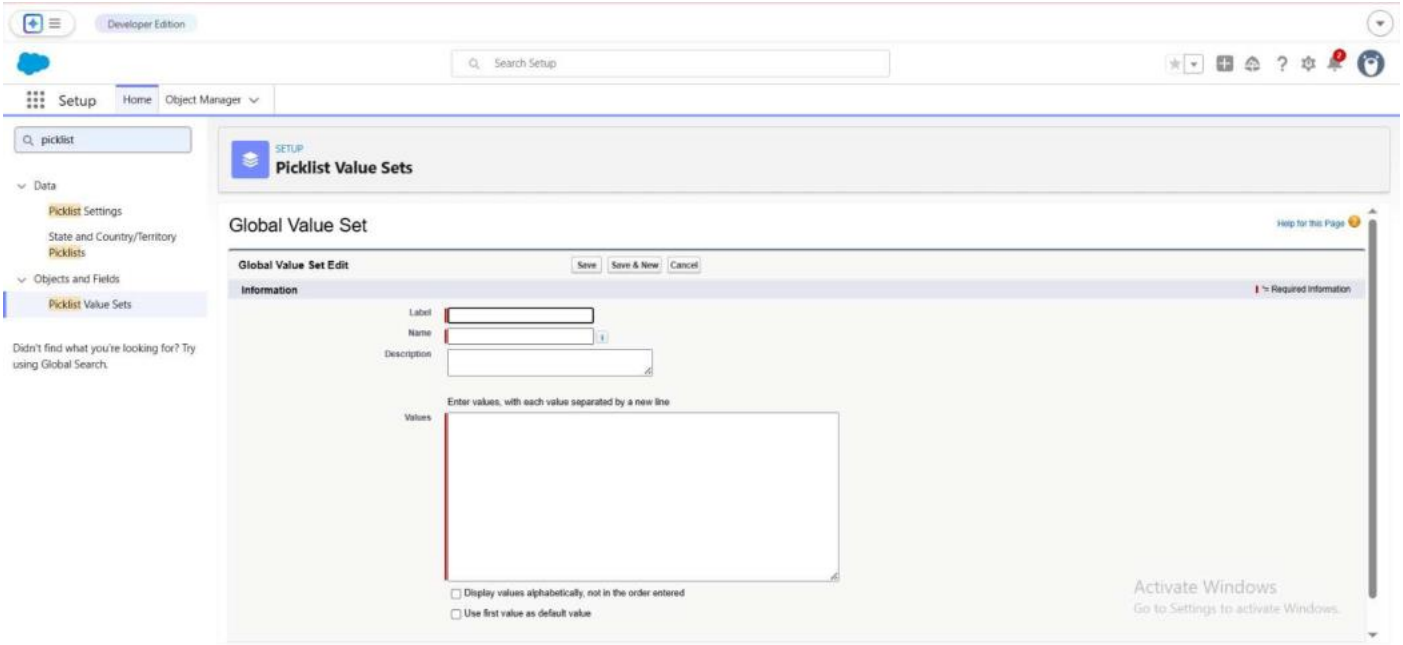
The fourth milestone focused on developing a **Lightning App** to centralize all CRM operations. This provided users with a single dashboard for accessing customer, employer, and enterprise features efficiently.

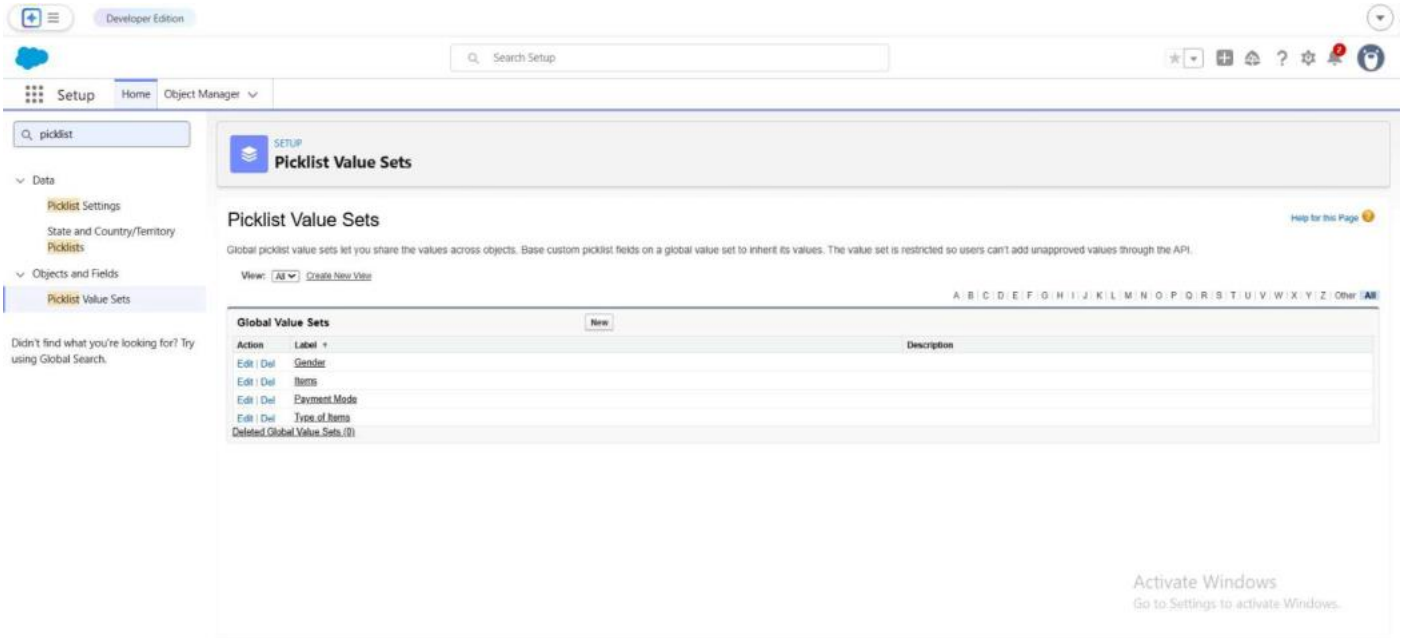




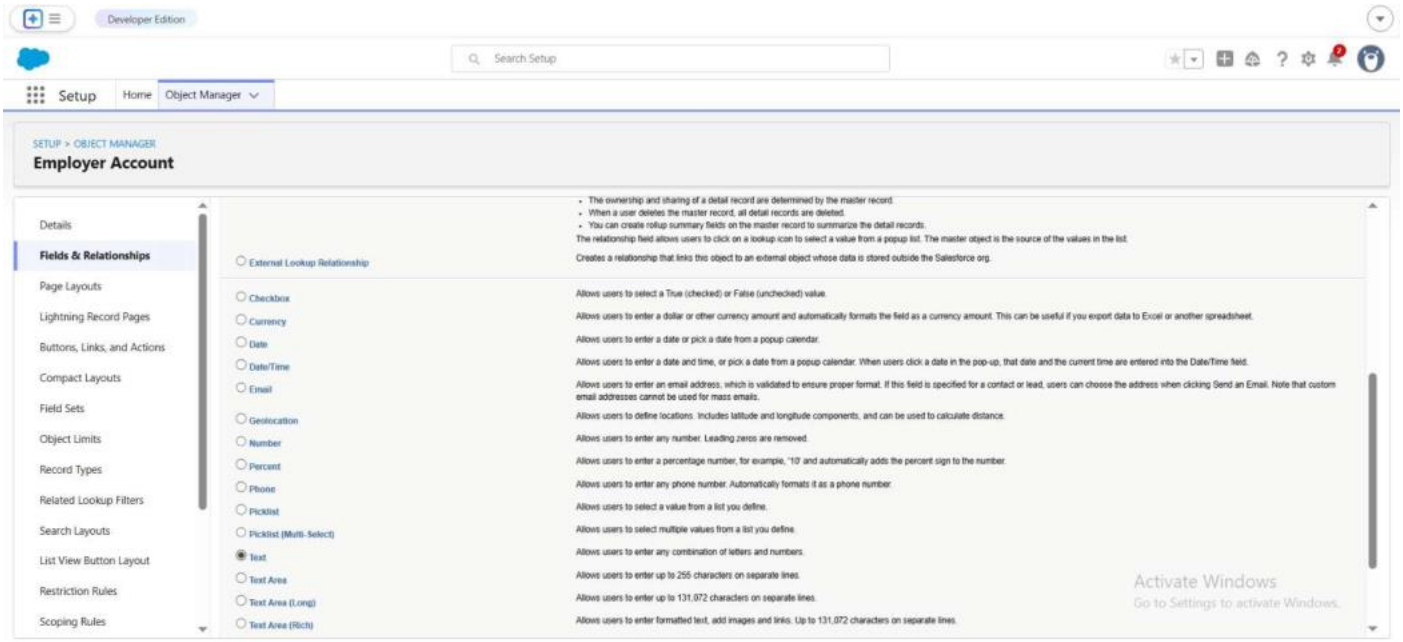
Milestone 5 – Global Picklist

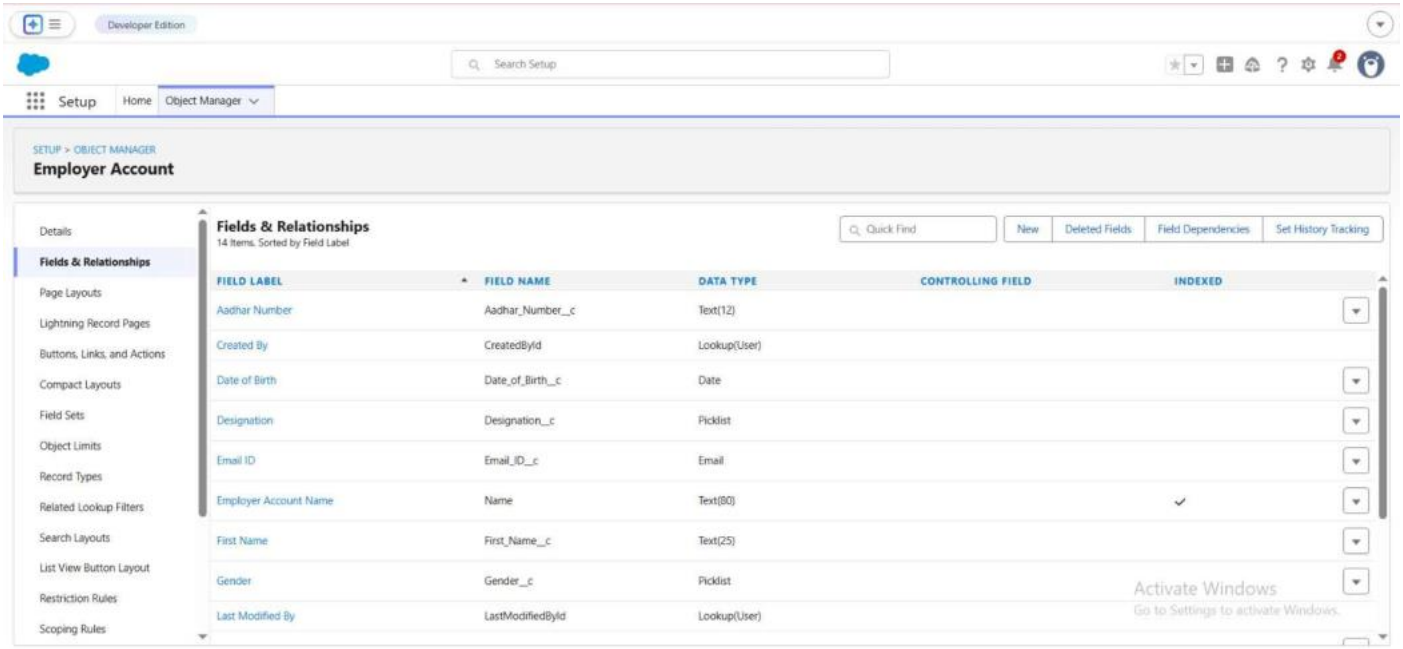
The fifth milestone involved setting up **global picklists** to standardize field values across the CRM. This ensured consistency for data such as product types, categories, and status fields.



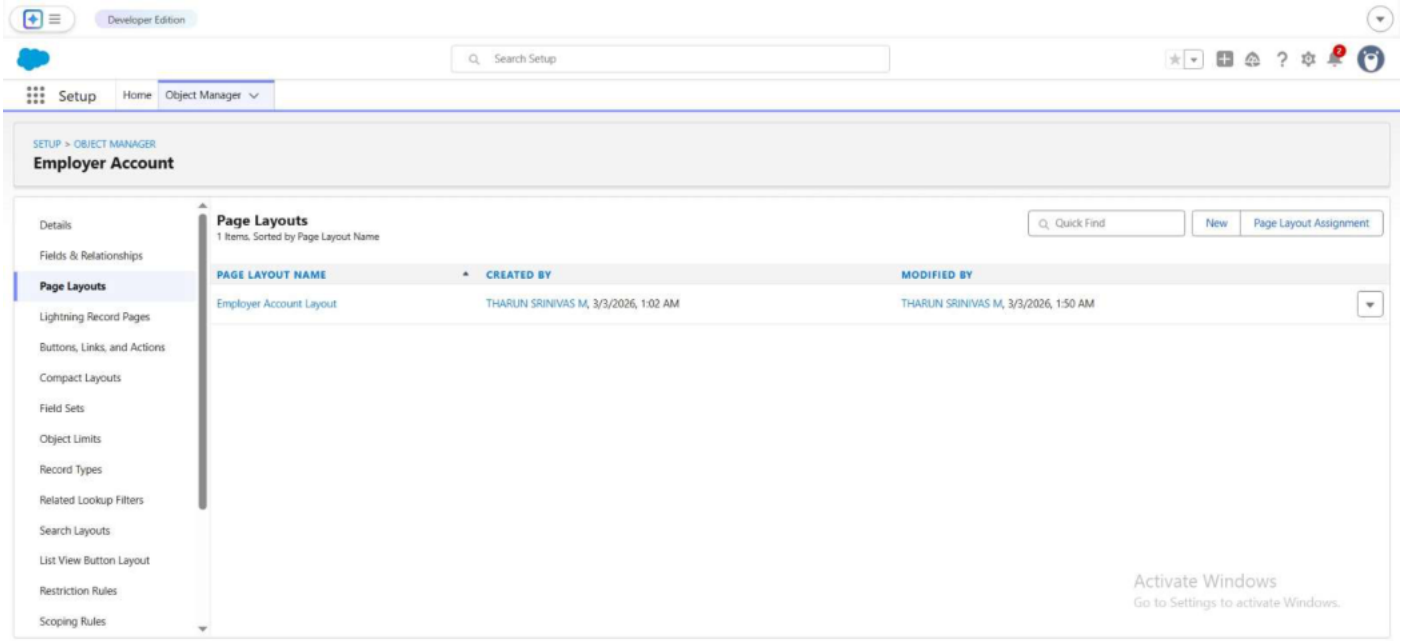


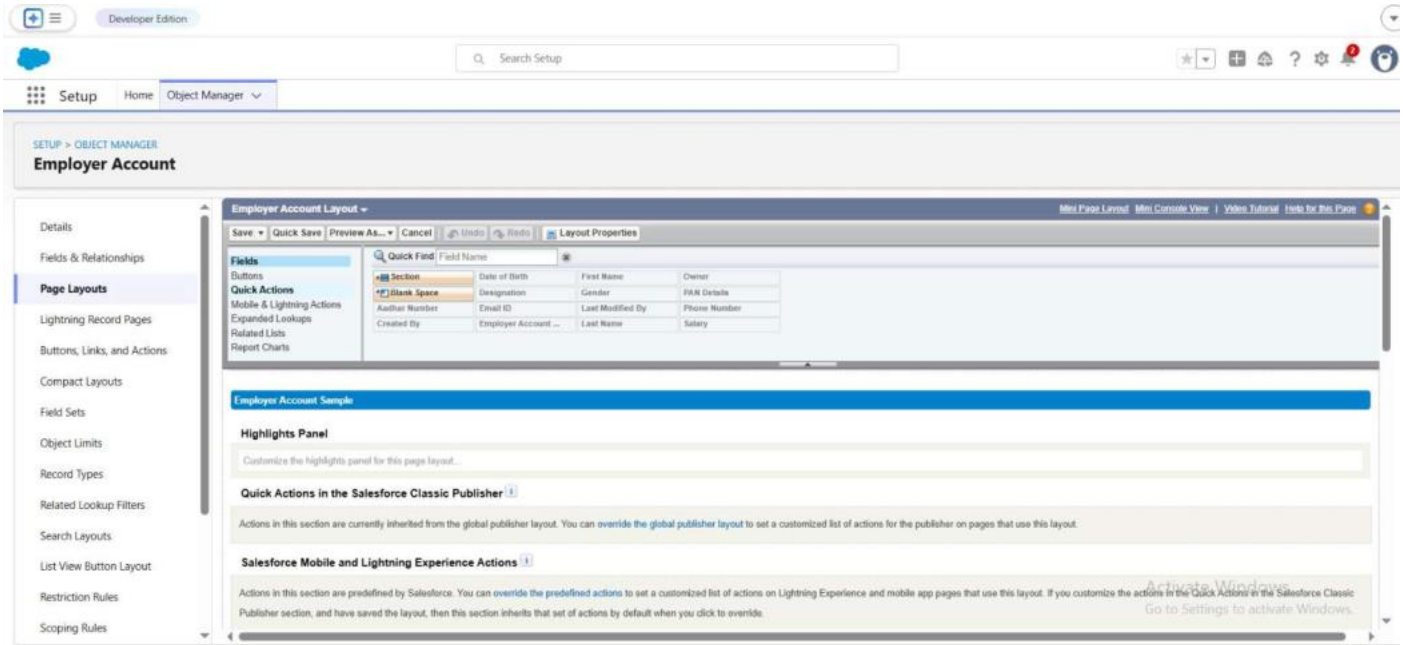
Milestone 6 – Fields and Relationships





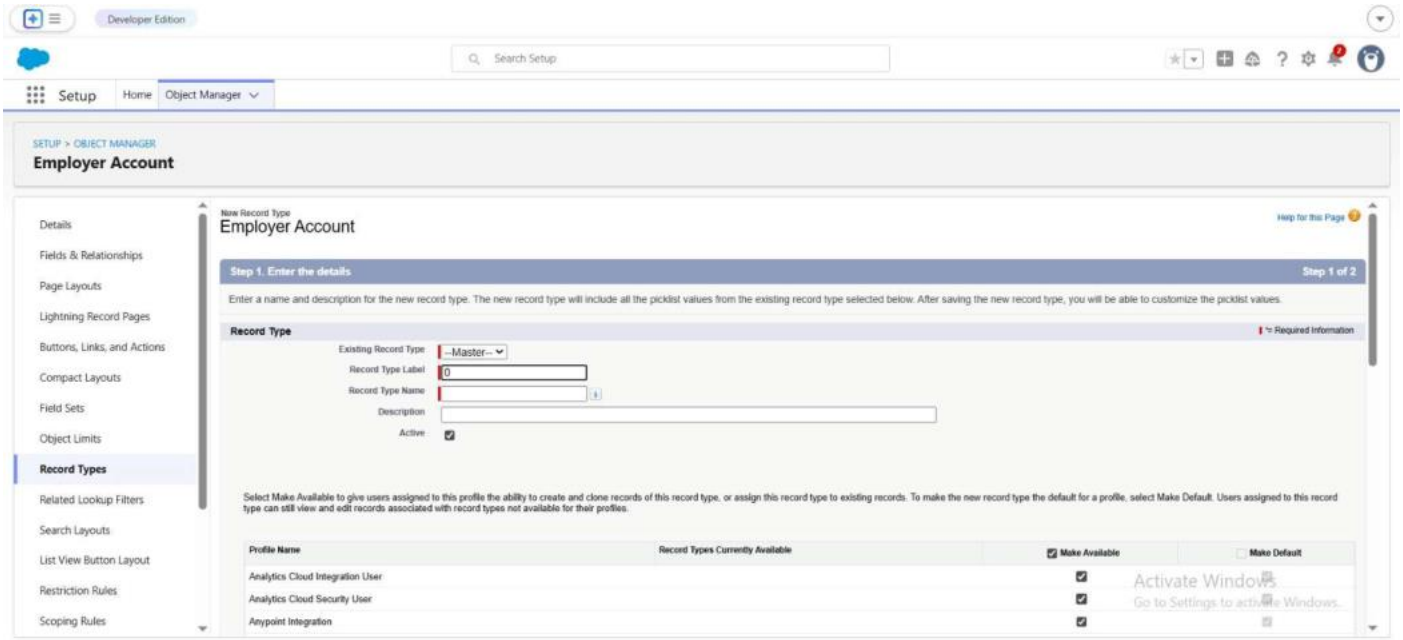
Milestone 7 – Creation of Page Layouts





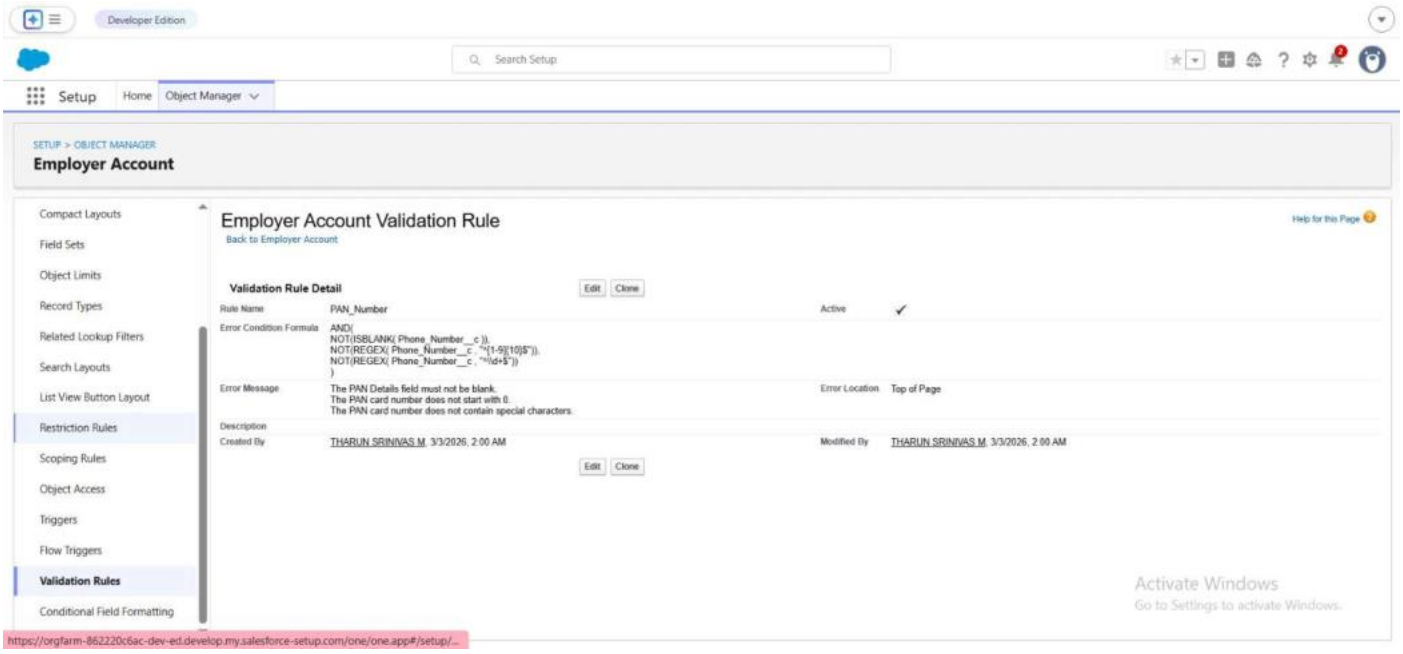
Milestone 8 – Creation of Record Types

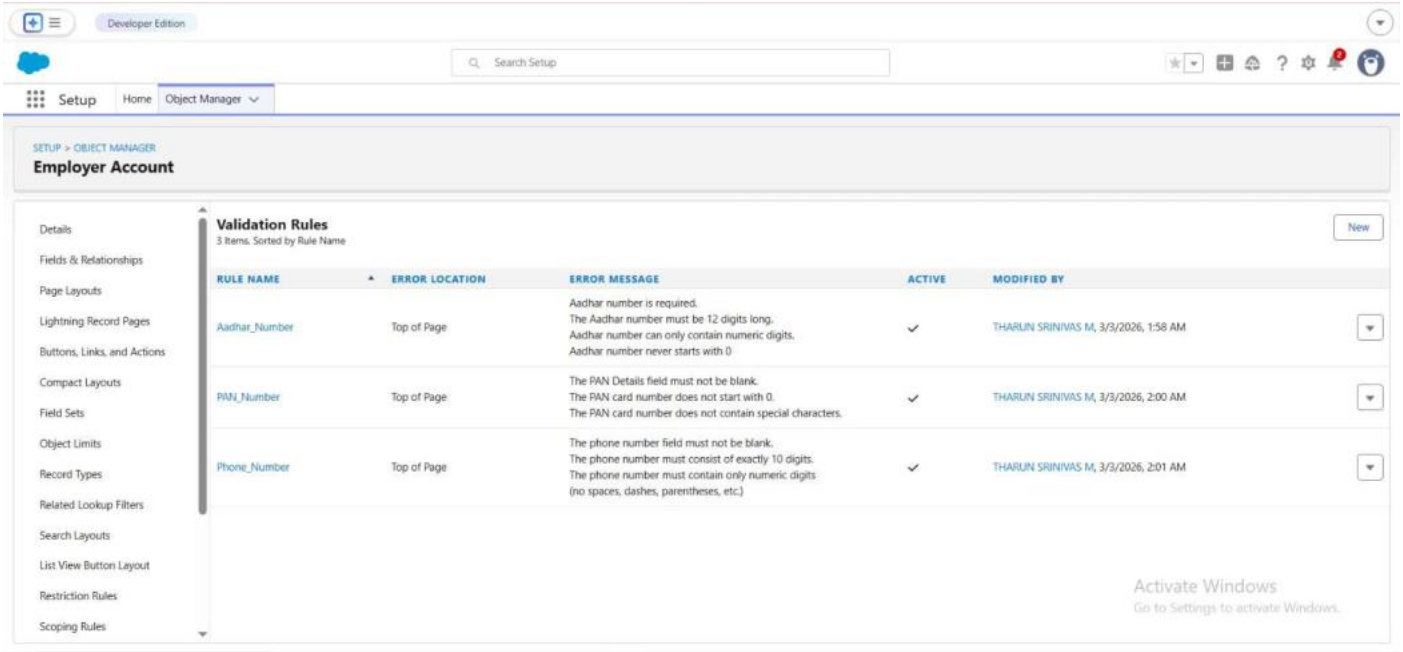
The ninth milestone involved creating **validation rules** to ensure accurate data entry. These rules prevented users from entering incorrect or incomplete information in fields like phone numbers and order details.



Milestone 9 – Validation Rules

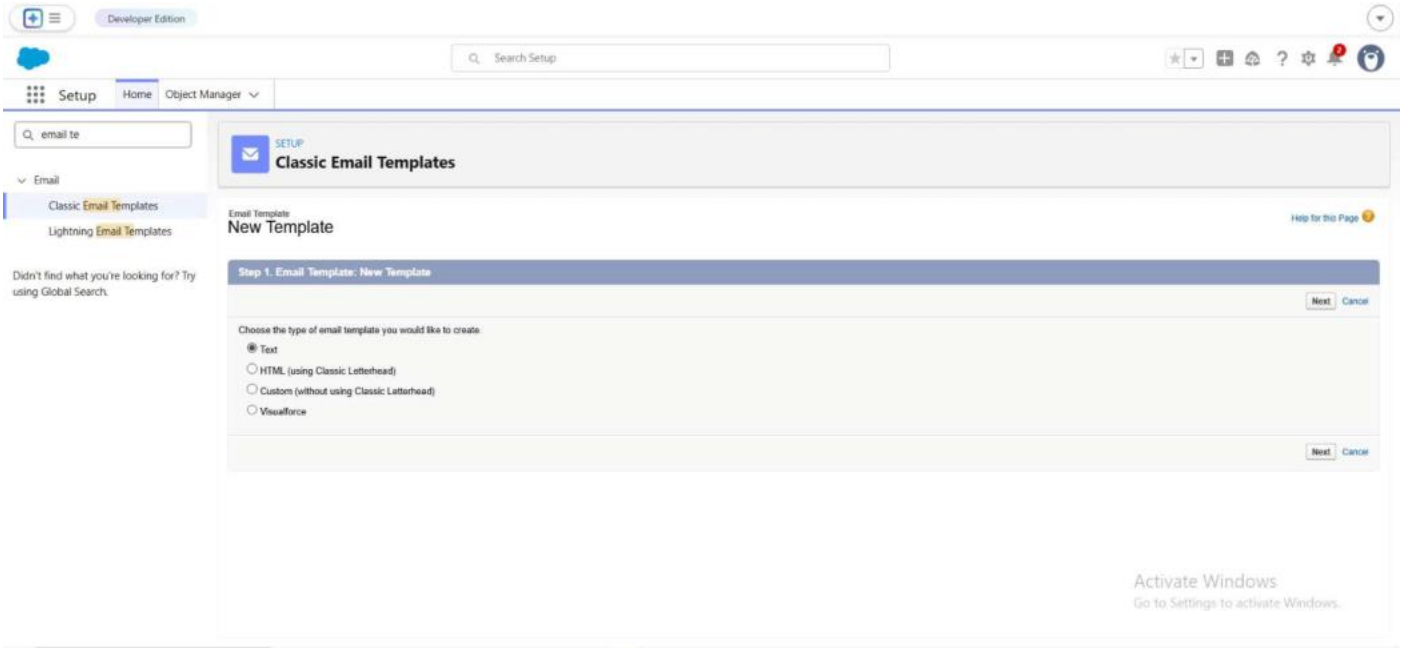
The ninth milestone involved creating **validation rules** to ensure accurate data entry. These rules prevented users from entering incorrect or incomplete information in fields like phone numbers and order details.

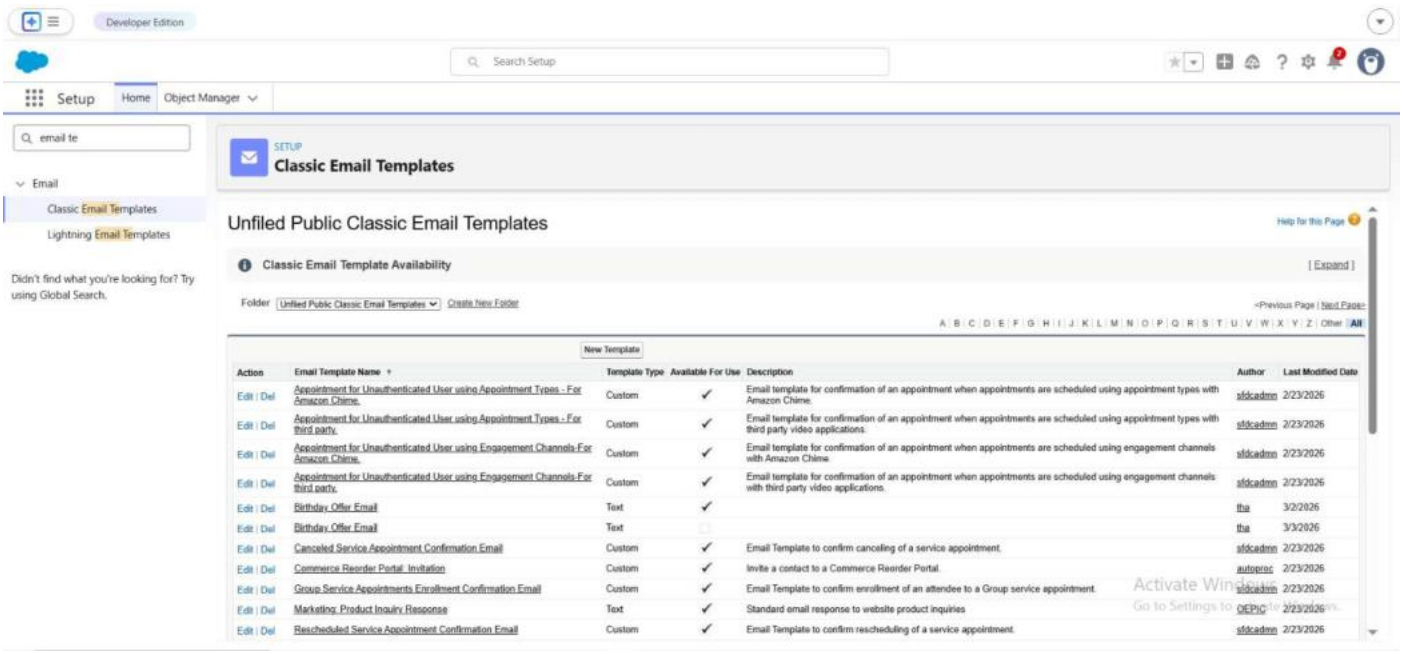




Milestone 10 – Email Templates

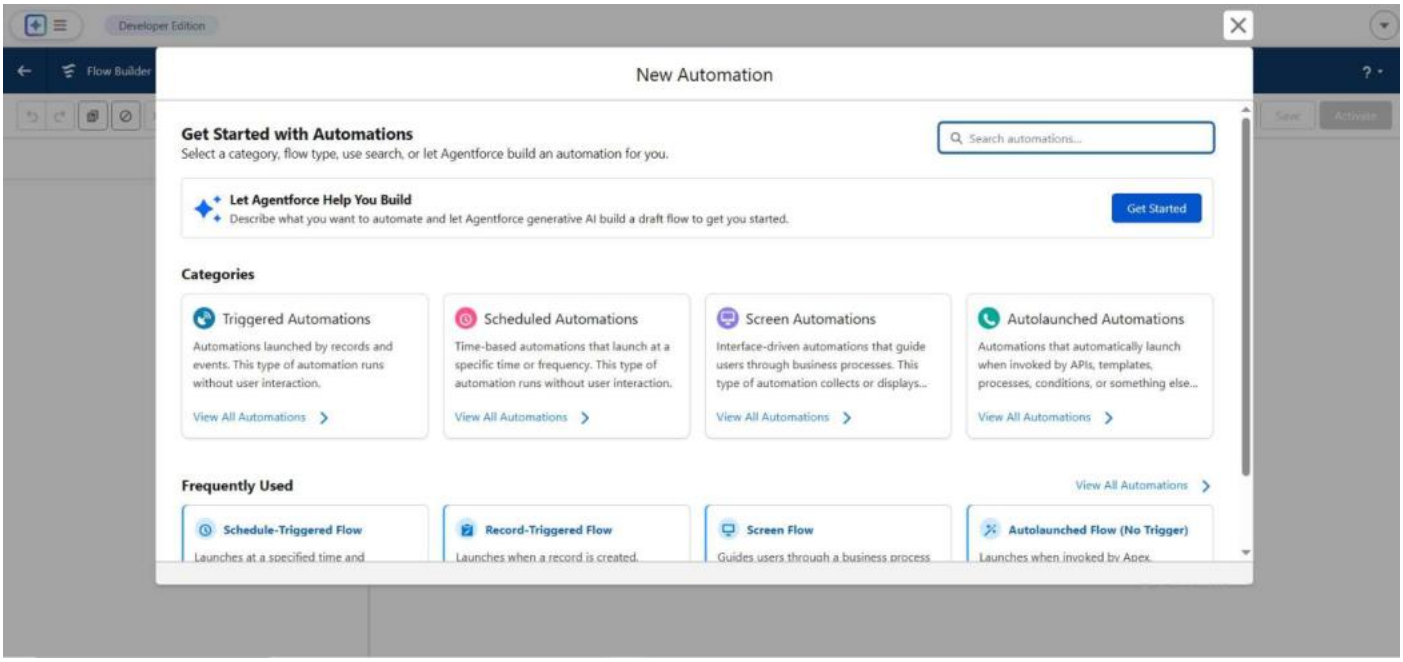
The tenth milestone focused on creating email templates for automated customer communication. These templates were used for sending birthday greetings, promotional offers, and order confirmations.

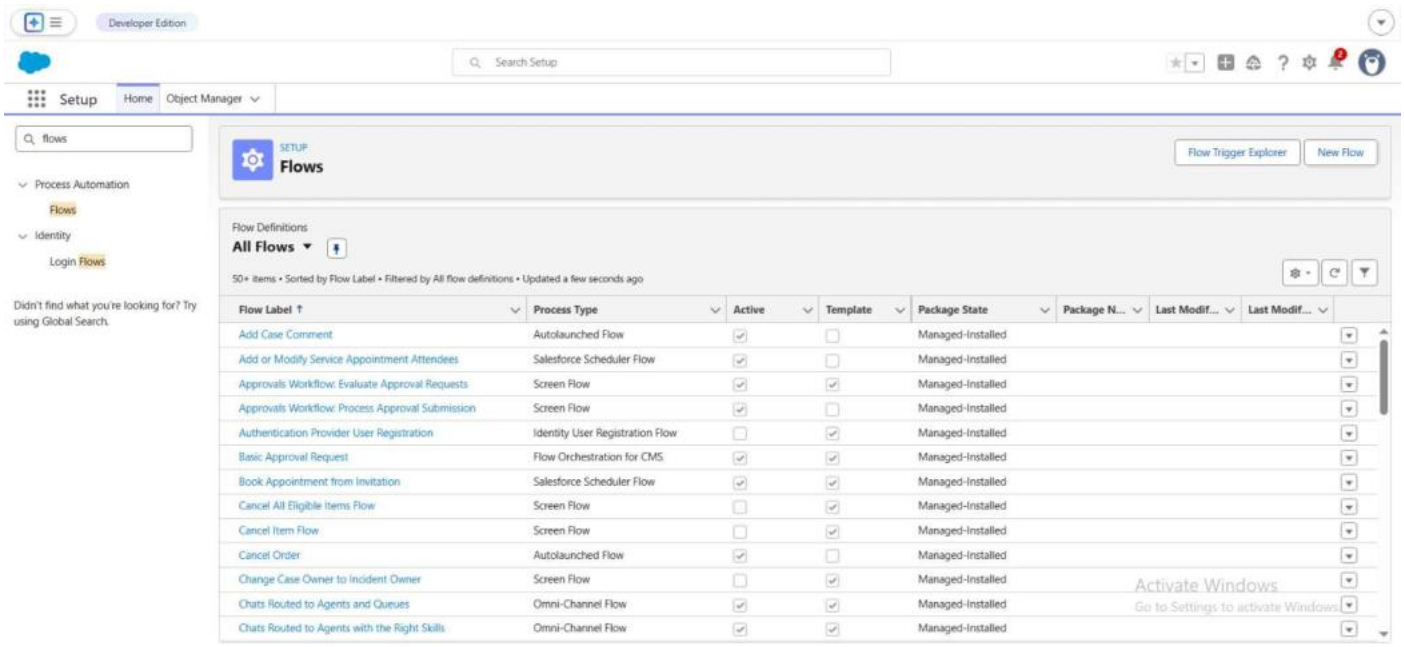




Milestone 11 – Flows

The eleventh milestone involved creating Salesforce flows to automate tasks. These flows handled actions such as updating records, sending email notifications, and streamlining repetitive processes.





Milestone 12 – Reports and Dashboards

The twelfth milestone focused on creating **reports and dashboards** for real-time insights. These tools allowed managers to monitor sales, customer activity, and enterprise performance effectively.

Milestone 12 - Conclusion

In conclusion, the development of TheChaiShop&Co CRM application marks a significant stride in enhancing the store's operational efficiency and customer relationship management capabilities. Seamlessly integrating employer details, customer information (both online and offline), and enterprise data, this application streamlines business processes and enables informed decision-making. The automation of sales calculations, including order quantity and total bill amount, reduces errors and empowers employees to focus on delivering exceptional service. Moreover, automated email notifications for customers' birthdays foster personalized communication and enhance customer engagement.

7. FUNCTIONAL & PERFORMANCE TESTING

During the testing phase, screenshots were captured from the Salesforce Lightning interface to verify correct system behavior. These include:

- Record creation for Employer, Customer, and Enterprise objects
- Validation rule testing for Aadhar, PAN, and phone numbers
- Verification of record types and page layouts
- Formula field validation for order quantity and billing
- Flow execution for birthday email alerts
- Report and dashboard generation

Performance testing ensured fast response time and system stability during concurrent usage.

8. ADVANTAGES & DISADVANTAGES

Advantages

- Centralized data management
- Reduced manual work
- Automated calculations
- Improved customer engagement
- Real-time analytics

Disadvantages

- Requires Salesforce license
- Internet dependency
- Limited offline access

9. Conclusion:

The CRM Application for TheChaiShop&Co successfully improves business operations by integrating customer data, automating billing, and enabling intelligent reporting. The system reduces errors, saves time, and enhances customer relationships through automation and analytics.

10. FUTURE SCOPE

- Mobile CRM integration
- AI-based sales prediction
- WhatsApp/SMS alerts
- Inventory management
- Multi-branch support
- Advanced customer profiling
